● A 102 R.

The first Murphy post-war Radiogram. . .

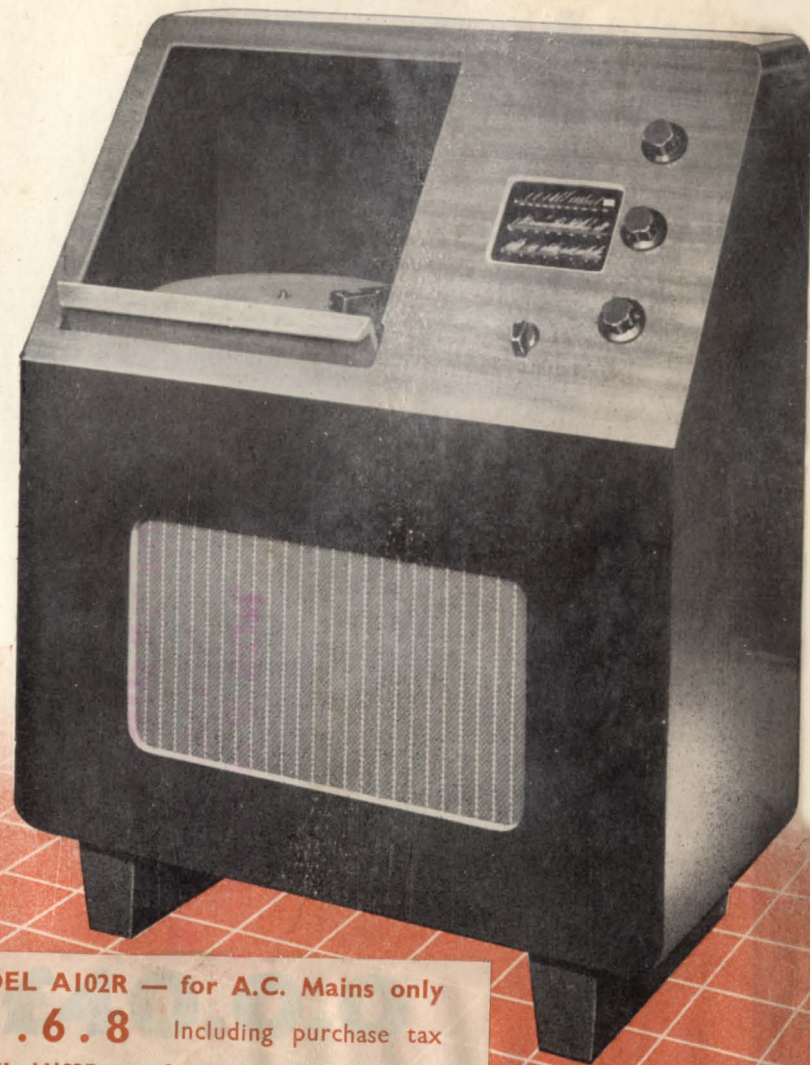

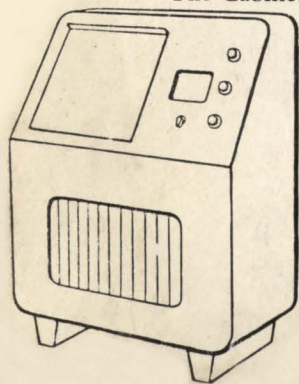

How grand after all these years to be announcing a Murphy Radiogram again. This model is the radiogram version of the popular U102 Table Model. The Radio performance is indeed much the same but with two improvements. The A102 R. can and does make good use of a bigger loudspeaker. And since we have to make a big cabinet anyway to accommodate the 'gram equipment we design it so that in itself it helps to improve the reproduction of sound.

In designing the A102 R. we set out to produce a radiogram with first-class reproduction and a high reliability standard at as reasonable a price as possible. So there are no "frills" on this model. No luxury items such as self-changing equipment. But it is a fine and handsome instrument which will give many years of pleasure with the minimum of trouble.

The A102 R. is designed for A.C. MAINS use only. A full vision tuning scale is provided giving a long list of station names on Short, Medium and Long Waves.

The Cabinet is designed so that the radio and gramophone sections are side by side. This arrangement is acoustically an advantage and also makes an attractive and pleasing 'layout'. A panel on the left of the cabinet slides downwards to give access to the gramophone turntable and pick-up. The main illustration shows this panel in its open position. Two woods are used in the cabinet—mahogany for the sloping front and top and birch for the sides and base.
